They were 7 ft 9in wide at the waist and approximately 7ft 5in wide at the bottom of the body side, forming a very slight tumble home curve. They were constructed in two distinct series and there were probably quite a lot of differences between the two series |

| Phoenix Precision Paints | Non-passenger coaching stock | Kits | | | LNWR 4 WHEEL FULL BRAKE - Etched brass kit. Introduced circa 1870 as a 26 ft full brake approximately 110 were built but from 1872-3 they were given a 6 wheel chassis. The model will build up to give the original 4 wheel version. These vehicles lasted until the early 1900s when they were replaced with the larger 30 ft design. As these were ed as non passenger carrying stock it is assumed they would have been in standard coach livery of that period. |
| Phoenix Precision Paints | Non-passenger coaching stock | Kits | | | LNWR 4 COMPARTMENT MILK AND FRUIT VAN - Etched brass kit. These vans were four wheelers, on a 16 foot wheelbase chassis. They were 7 ft 9in wide at the waist and approximately 7ft 5in wide at the bottom of the body side, forming a very slight tumble home curve. They were similar in construction to the 4 wheel parcels van except having large louvered panels in the doors these were apparently shown in a LNWR drawing No. 1632 dated 19-11-91 showing that at that time 33 of the 25ft parcel vans had been converted using louvered door panels to alter them to Milk and Fruit vans. |
